

MAGNUM 3 BUTTON SELF-LEARNING TX

The Magnum Code Learning remote can be used to clone any non-rolling code transmitter on the 403,55mhz frequency band. Binary, French and Trinary formats can be cloned in any combination.

The transmitter is defaulted to a random binary code during manufacture.

Mode of Operation:

Select the transmitter button to be programmed. Press the button. The LED will light, showing that a transmission is in progress. Press and hold the button in, after about 4 seconds the LED will switch off.

The transmitter is now in the programming mode.

- Keep the button pressed and hold the transmitter you want to program next to the self-learning transmitter as shown in the diagram.
- Press and hold the button on the remote to be programmed until the self-learner LED flashes fast.
- Release both buttons.

Your transmitter is now duplicated

Repeat the procedure for the remaining two buttons if required.
